

DuBois

Wastewater Treatment

What We Put In, We Can Take Out!

DuBois has over 80 years of experience in customer satisfaction. We specialize in integrating “upstream” production with “downstream” waste treatment operations. DuBois products are tested and then ranked according to potential impact on waste treatment. This allows for the most logical product selection based on substrate requirements and contaminant removal capabilities.

DuBois Team Approach

We believe in a team approach to wastewater treatment. Your system will be backed by trained local and regional waste treatment representatives and corporate wastewater experts. These resources are available from start up, ensuring your facility remains in compliance with the service and results you demand.

Compliance

Years of experience in wastewater treatment lead to the selection of the right product for the right system design. Programs can then be chosen with confidence in both results and compliance.

Equipment

DuBois carries a complete line of feed, monitoring, and control systems required to operate treatment systems more efficiently. In addition, our relationships with co-suppliers allow us to assemble the right team to develop new wastewater systems, or upgrade existing systems.

Lab Capabilities

A variety of instrumentation is used to analyze samples, validate results, and solve customer issues.

- Chromatography
 - Anions, halides, sequestrants
- Spectroscopy
 - ICP - cations in solution
 - EDXFS - elemental analysis of solids
 - FTIR - fingerprinting and identifying unknowns
- Evaluating substrates, surfaces, films and coatings

Waste Treatment Products

Coagulite Product Line

Full line of organic polymers, inorganic coagulants, and blends. Designed to coagulate, destabilize, and aid in the removal of suspended solids, oils, metals, and other contaminants.

Floculite Product Line

High molecular weight organic flocculants designed to agglomerate “pin floc” for faster settling.

Split Product Line

These products are designed to enhance removal of emulsified and free oils from water.

EMR Product Line

A full line of formulated organic precipitants and polymeric compounds used for precipitation and coagulation of heavy metals in the presence of problematic chelants.

The DuBois logo features the company name in a bold, white, sans-serif font. Above the text, there are three curved lines that sweep from left to right, creating a sense of motion or a stylized wave. The logo is set against a dark blue background.
