

**DuBois**

**Wastewater Treatment  
Food Industry**

# What We Put In, We Can Take Out!

DuBois has over 80 years of experience in customer satisfaction. We specialize in integrating “upstream” process with “downstream” waste treatment operations. DuBois can help you focus your time on what you do best – provide the highest quality food products to consumers.

## DuBois Team Approach

We believe in a team approach to wastewater treatment. Your system will be backed by trained local and regional waste treatment representatives and corporate wastewater experts. These resources are available from start-up, ensuring your facility remains in compliance with the service and results you demand.

## Compliance

We focus on these components of operation: cleaning and sanitation, lubrication, and process water treatment. DuBois will configure an action plan based on your operation that will make your plant efficient, safe, profitable, and compliant. Our decades of experience in integrating these “upstream” processes and our deep understanding of the chemistries involved results in substantial “downstream” benefits.

## Equipment

DuBois carries a complete line of feed, monitoring, and control systems required to operate treatment systems more efficiently. In addition, our relationships with co-suppliers allow us to assemble the right team to develop new wastewater systems, or upgrade existing systems.

## Lab Capabilities

A variety of instrumentation is used to analyze samples, validate results, and solve customer issues.

- Chromatography
  - Anions, halides, sequestrants
- Spectroscopy
  - ICP – cations in solution
  - EDXFS – elemental analysis of solids
  - FTIR – fingerprinting and identifying unknowns

## Let DuBois Help You “Close the Loop”

# Waste Treatment Products

## Coagulate Product Line

Full line of organic polymers, inorganic coagulants, and blends designed to coagulate, destabilize, and aid in the removal of suspended solids, oils, metals, insoluble BOD, and other contaminants.

## Floculite Product Line

High molecular weight organic flocculants designed to agglomerate “pin floc” for faster settling or flotation.

## Split Product Line

These products are designed to enhance removal of emulsified and free oils from water.

## Environmental Specialties

This line includes odor control and absorbent materials to enhance overall waste plant conditions.
